7.4 General Handling Precautions

- a. Always wear static control bands to protect against ESD.
- b. Any devices used with the beads (soldering iron, measuring instruments) should be properly grounded.
- c. Keep bare hands and metal conductors (i.e., metal desk) away from chip electrodes or conductive areas that lead to chip electrodes.

7.5 Precautions on Use

- a. Pre-heating when soldering, see detail in **Clause 9** in this specification.
- b. When splitting the PC board after mounting beads and other components, care is required so as not to give any stress of deflection or twisting to the board.
- c. Don't apply current in excess of the rated current value. It may reduce the impedance due to the temperature increase effect.
- d. Always wear static control bands to protect against ESD.
- e. Keep clear of anything that may generate magnetic fields such as speakers, coils.
- f. When Soldering, the impedance may be varied due to hot energy and mechanical stress.
- g. Mounting ships with adhesive in preliminary assembly, before the soldering stage, may lead appropriately checked; the size of land pattern, type of adhesive, amount applied, hardening of the adhesive on proper usage and amounts of adhesive to use.
- h. Mounting Density: Add special attention to radiating heat of products when mounting the beads near the products with heating. The excessive heat by other products may cause deterioration at joint of this product with substrate.
