1. 适用范围 SCOPE :

本产品规格书对产品的性能，测试方法进行了规范，作为技术确认的依据。

This product specification specifies the product's performance and test methods as a basis for technical validation.

2. 一般特性 General Specification :

2.1 产品应用范围 (Product application range) :

◆**后备电源**：RAM、雷管、汽车记录仪、智能仪表、真空开关、数码相机、马达驱动

◆Backup power: RAM, detonator, car recorder, smart meter, vacuum switch, digital camera, motor drive

◆**储能**：智能三表、UPS、安防设备、通信设备、手电筒、水表、气表、车尾灯、小家电

Energy storage: intelligent three meters, UPS, security equipment, communication equipment, flashlights, water meters, gas meters, taillights, small appliances.

◆**大电流工作**：电气化铁路、智能电网控制、混合动力车、无线传输

High current operation: electrified railway, smart grid control, hybrid vehicle, wireless transmission.

◆**大功率支持**：风力发电、机车启动、点火、电动汽车等

High-power support: wind power, locomotive start, ignition, electric cars, etc.

2.2 标准测试条件 (Standard test conditions) :

本规格书标准测试条件为标准大气压，温度25℃，相对湿度小于60%。

The standard test conditions of this specification are standard atmospheric pressure, temperature 25 ° C, relative humidity less than 60%.

2.3 测试依据标准(Test basis) :

QC/T 741-2014 《车用超级电容器》

QC/T 741-2014 《Vehicle super capacitor》

DL/T 1652-2016 《电能计量设备用超级电容器技术规范》

9.3.2测量方法 Measuring method

电容器的内阻Ra应通过下式计算:

The internal resistance Ra of a capacitor shall be calculated by the following formula:

$$R_a = \frac{U}{I}$$

其中 where

Ra 交流内阻 a.c. internal resistance (Ω) ;

U 交流电压有效值 the effective value of a.c. voltage (V r.m.s) ;

I 交流电流有效值 the effective value of a.c. current (V r.m.s) 。

测量电压的频率，应为1kHz。

The frequency of the measuring voltage shall be 1 kHz

交流电流应为1mA至10mA。

The a.c. current shall be from 1 mA to 10 mA

11. 使用注意事项 Precautions for use

11.1 超级电容器不可使用在如下状态：

Supercapacitors cannot be used in the following states

a) 超过标称温度的温度 temperature above the nominal temperature

当电容器温度超过标称温度时，将会导致电解液分解，同时电容器会发热，容量下降，而且内阻增加，寿命缩短。

When the temperature of the capacitor exceeds the nominal temperature, it will cause the electrolyte to decompose, and the capacitor will heat up and the capacity will drop. Moreover,

the internal resistance is increased and the life is shortened.

b) 超过额定电压的电压 voltage exceeding the rated voltage

当电容器电压超过标称电压时，将会导致电解液分解，同时电容器会发热，容量下降，而且内阻增加，寿命缩短。所以降低使用电压可提高使用寿命。

When the capacitor voltage exceeds the nominal voltage, it will cause the electrolyte to decompose, and the capacitor will heat up and the capacity will drop. Moreover, the internal resistance is increased and the life is shortened. Therefore, reducing the voltage used can increase the service life.

c) 逆电压或交流电压的加载 loading of reverse voltage or alternating voltage

11.2 周围温度对超级电容器的影响 Influence of ambient temperature on supercapacitors

超级电容器的使用寿命受使用温度的影响，一般情况下，使用温度提升10°C，超级电容器的寿命会缩短一半，请尽量在低于最高使用温度的低温环境下使用。超过最高使用温度使用的话，可能会造成特性急剧劣化，破损。

超级电容器的使用温度不仅要确认设备周围温度，内部温度，还要确认设备内发热体（功率晶体管、电阻等）的放射热，纹波电流引起的自行发热温度。此外，还请勿将发热体安装在超级电容器的附近。

The service life of supercapacitors is affected by the temperature of use. Under normal circumstances, the temperature of the supercapacitor is reduced by 10 °C, and the life of the supercapacitor is shortened by half. Try to use it in a low temperature environment below the maximum operating temperature. If it is used beyond the maximum operating temperature, the characteristics may deteriorate rapidly and be damaged.

The temperature of the supercapacitor should be determined not only by the temperature around the device, but also by the internal temperature. The radiant heat of the heating element (power transistor, resistor, etc.) in the device and the self-heating temperature caused by the ripple current are also confirmed. Also, do not install the heating element near the supercapacitor.

11.3 请按电容器的正负极标识正确使用。

Please use the positive and negative signs of the capacitor correctly

11.4 请避免在以下环境中使用超级电容器。

Please avoid using super capacitors in the following environments.

a) 直接溅水、盐水及油的环境、或处于结露状态、充满着气体状的油分或盐分的环境。

Environment where direct splashing water, salt water and oil are present, or in a dew condensation state, filled with gaseous oil or salt.

b) 充满着有害气体（硫化氢、亚硫酸、氯、氨、溴、溴化甲基等）的环境。

An environment filled with harmful gases (hydrogen sulfide, sulfurous acid, chlorine,

ammonia, bromine, methyl bromide, etc.).

c) 溅上酸性及碱性溶剂的环境。

An environment where acidic and alkaline solvents are splashed.

d) 阳光直射或有粉尘的环境。

Direct sunlight or dusty environment.

e) 遭受过度的振动及冲击的环境。

An environment that is subject to excessive vibration and shock.

11.5 在焊接过程中要避免使电容器过热 (1.6mm的印刷线路板, 焊接时应为260°C, 时间不超过5s)。

In the welding process to avoid overheating the capacitor (1.6mm printed circuit board, welding should be 260 ° C, the time does not exceed 5s).

11.6 请避免在超级电容器的引出极间或连接板焊点间进行电路配线。

Please avoid circuit wiring between the lead terminals of the supercapacitor or the solder joints of the connecting plates.

11.7 过电压及超过工作温度范围等超出额定条件使用时, 可能导致压力阀动作, 电解液会喷出。因此, 请采用已考虑到此异常状况可能发生的设计方法。

When the overvoltage and the operating temperature range exceed the rated conditions, the pressure valve may act and the electrolyte may be ejected. Therefore, please adopt a design method that has taken into account this abnormal condition.

11.8 快速充放电时, 充电开始时、放电开始时, 会产生由内部阻抗导致的压降(也叫IR降), 所以, 请采用已考虑到电压变化幅度的设计方法。

In the case of rapid charge and discharge, a voltage drop due to internal impedance (also called IR drop) occurs at the start of charging and at the beginning of discharge. Therefore, use a design method that takes into account the magnitude of the voltage change.

11.9 功率型大容量产品 (约10F以上产品) 充电状态下如果端子短路, 会有数百安培的电流流过, 危险。请不要在充电状态下进行安装和拆卸。

Power type large-capacity products (about 10F or more) If the terminal is short-circuited during charging, there will be hundreds of amps of current flowing, which is dangerous. Please do not install or disassemble while charging.

11.10 不要把电容器放入已溶解的焊锡中, 只在电容器的导针上粘焊锡。不可让焊接用焊棒接触电容器热缩管。

Do not put the capacitor in the dissolved solder, only solder the solder on the guide pin of the capacitor. Do not allow the welding rod to contact the capacitor heat shrink tubing.

11.11 安装后, 不可强行扭动或倾斜电容器。

Do not forcibly twist or tilt the capacitor after installation.

11.12 超级电容器串联使用时，存在单体间的电压均衡问题。

When the supercapacitors are used in series, there is a voltage balance problem between the cells.

12. 保存要求 Saving request

12.1 不可存放于相对湿度大于85%或含有有毒气体的场所和高温、高湿的环境中。建议长期储存在温度-30°C~50°C、相对湿度小于60%的环境中。

Do not store in a place with a relative humidity greater than 85% or containing toxic gases and in a high temperature, high humidity environment. It is recommended to store in an environment with a temperature of -30°C~50°C and a relative humidity of less than 60% for a long time.

12.2 避免以下环境中保存超级电容器

Avoid preserving supercapacitors in the following environments

a) 直接溅水、盐水及油的环境、或处于结露状态、充满着气体状的油分或盐分的环境。

Environment where direct splashing water, salt water and oil are present, or in a dew condensation state, filled with gaseous oil or salt.

b) 充满着有害气体（硫化氢、亚硫酸、氯、氨、溴、溴化甲基等）的环境。

An environment filled with harmful gases (hydrogen sulfide, sulfurous acid, chlorine, ammonia, bromine, methyl bromide, etc.).

c) 溅上酸性及碱性溶剂的环境。

An environment where acidic and alkaline solvents are splashed.

d) 阳光直射或有粉尘的环境。

Direct sunlight or dusty environment.

e) 遭受过度的振动及冲击的环境。

An environment that is subject to excessive vibration and shock.

13. 关于废弃 About discarding

不要随意丢弃，遵循法令或地方公共团体等指定的条例，将废弃品交给工业废弃物处理商。

Don't throw it away randomly. Follow the laws and regulations or local public organizations and other designated regulations, and hand over the waste to the industrial waste disposal company.

其它超级电容器方面的问题，请向生产厂家咨询或参照超级电容器使用说明的相关技术资料执行。

For other supercapacitor problems, please consult the manufacturer or refer to the relevant technical data of the supercapacitor instructions.
